

## Subject: Full Graphic Hard Hats

- All of DSI's hardhats are certified to the latest version of the Canadian standard CSA Z94.1-15.
- Film-wraps, logos, stickers and reflective strips are not part of the testing and certification program for CSA. These accessories are not included in the CSA testing and certification procedure.
- Dynamic Safety adds these accessories upon customers' requests. These accessories are added in DSI's head protection manufacturing facility in Laval, Qc while using proper installation processes and materials making sure that:
  - The materials used are compatible with the hardhat.
  - The installation process does not alter or modify the characteristics of the hardhat.

The addition of such accessories (like film-wraps, logos, stickers and/or reflective strips) does not affect the integrity of the hardhat, nor alter its characteristics. Additionally, these accessories do not interfere with the fit, form or function of the hardhat; and they do not reduce its protective properties. Therefore, the hardhat is still qualified as CSA certified.

Thank you
