FALL PROTECTION PLAN

Assembly, Maintenance, Inspection, Disassembly Procedures

Assembly and disassembly of all equipment will be done according to manufacturers' recommended procedures. (Include copies of manufacturer's data for each specific type of equipment used.)
Designate who will be responsible for each task and what level of training they have.

Specific types of equipment on the job are:

A visual inspection of all safety equipment will be done daily or before each use, as stated in the Employee Training Packet. Any defective equipment will be tagged and removed from use immediately. The manufacturer's recommendations for maintenance and inspection will be followed.

Handling, Storage & Securing of Tools and Materials

Toe boards will be installed on all scaffolding to prevent tools and equipment from falling from scaffolding. Other specific handling, storage and securing is as follows:

Overhead Protection

Hard hats are required on all job sites with the exception of those that have no exposure to overhead hazards. Warning signs will be posted to caution of existing hazards whenever they are present. In some cases, debris nets may be used if a condition warrants additional protection.

Additional overhead protection will include:

Toe boards (at least 4 inches in height) will be installed along the edge of scaffolding and walking surfaces for a distance sufficient to protect employees below. Where tools, equipment or materials are piled higher than the top of the toe board, paneling or screening will be erected to protect employees below.

FALL PROTECTION PLAN

Injured Worker Removal

Normal first aid procedures must be performed as the situation arises. If the area is safe for entry, the first aid must be done by a foreman or other certified individual.

Initiate Emergency Services: DIAL 911 (where available)

Phone Location:		First Aid Location:	
Elevator Location:		Crane Location:	
Other:		Location:	

Rescue considerations. When personal fall arrest systems are used, the employer must assure that employees can be promptly rescued or can rescue themselves should a fall occur. The availability of rescue personnel, ladders, or other rescue equipment must be evaluated. In some situations, equipment that allows employees to rescue themselves after the fall has been arrested may be desirable, such as devices that have descent capability.

Describe methods to be used for the removal of the injured worker(s):

Training and Communication

All new employees will be given instructions on the proper use of fall protection devices before they begin work. They will sign a form stating they have been given this information. This form becomes part of the employee's personnel file.

The written fall protection plan will be reviewed before work begins on the job site. Those employees attending will sign below. The fall protection equipment use will be reviewed regularly at the weekly safety meetings.
